

Jeremy Kamber

Seattle, WA | kamberj@uw.edu | 973-879-5350 | [linkedin.com/in/jeremy-kamber](https://www.linkedin.com/in/jeremy-kamber) | github.com/jeremykamber

Full-stack Development · Software Architecture · Fast Learning · Problem-Solving · Data Analysis

Programming Languages:

SQL, Java, JavaScript (ES6+), HTML/CSS, Python, Dart, R

Frameworks & Libraries:

React, React Native, LangChain, Flutter, FastAPI, TensorFlow, Pandas, NumPy, scikit-learn

Tools & Platforms:

Docker, Git/GitHub, PostgreSQL, Google Analytics (GA4), Linux/Ubuntu

EDUCATION

Bachelor of Science in Informatics | University of Washington (UW) - Seattle

June 2027c

Software Development, Human-Computer Interaction

RELEVANT EXPERIENCE

Founder & Lead Engineer | Bringforth Studio (AI Product Lab) | Remote

Apr. 2025 – Present

- Architected and deployed an autonomous cold outreach pipeline utilizing local agentic workflows (n8n); reduced manual prospecting latency by over 70%.
- Led client discovery sessions to define target ICPs, engineered an internal email scraping REST API using Python and FastAPI, and deployed containerized builds on an Ubuntu VPS via Docker.

Director & Organizer | iStartup Launch Sprint (UW iStartup Lab) | Seattle, WA

March. 2026 – Present

- Co-founded and executed a high-velocity, two-week startup incubator program for 26 student founders; managed the end-to-end operational pipeline, sprint timelines, and stakeholder communications.
- Designed curriculum spanning customer discovery, MVP execution, and Go-To-Market; recruited industry mentors to provide office hours and run workshops, and institutional venture judges to evaluate student products.

PROJECTS

Kynd (Synthetic Persona User Testing Platform)

January 2026 – Present

- Developing an AI-driven user testing environment that extrapolates low-volume customer interview transcripts into comprehensive, synthetically extended user cohorts.
- Architected a "Persona Fidelity Framework" using RAG, OCEAN psychographic profiles, and narrative backstories; engineered features allowing users to alter traits and compare variant analysis results.
- Utilized VLMS (vision-language models) and Playwright browser orchestration on an Ubuntu VPS to capture pricing page elements and generate autonomous multi-agent "Council Debates" on product updates.

Strata (Agentic Memory System)

May 2026 – Present

- Designed and built a CLI-based multi-tier agent memory framework using deterministic physical decay and asynchronous consolidation; eliminates vector search noise and token degradation at scale.
- Implemented an active working memory layer structured as a deterministic Markdown directory tree with an index router file, removing expensive LLM memory-tree-pruning calls and resolving semantic drift.
- Engineered an automated data-migration pipeline using a Least Recently Used (LRU) eviction algorithm to transition stagnant context to long-term vector database storage and, eventually, compressed cold storage.

Echo (Local-first AI Journaling App)

Jan. 2025 – Present

- Conceptualized, developed, and marketed an AI journaling app using TDD, React, LangChain, and Ollama in a RAG pipeline with local embeddings and inference that reached 100+ initial users
- Augmented GA4 analytics with qualitative feedback (in-app like/dislike + lightweight Notion form) to surface user sentiment and inform product decisions
- Built data model and database for storing user feedback on AI responses in SQL (Postgres)

LEADERSHIP & INVOLVEMENT

Teaching Assistant (INFO 442) | University of Washington - Seattle

Mar. 2026 – June 2026

- Selected by faculty to support Cooperative Software Development; graded technical assignments and managed lab sections for over 30 students.
- Pioneered the course's first "AI resource library" and led the curriculum shift toward agentic development, introducing student frameworks for prompt engineering and agent harnesses.

Resident Advisor | University of Washington - Seattle

Sept. 2025 – Present

- Perform overnight on-call rotations, conducting facility rounds, and serving as the first point of contact to triage incidents, escalate emergencies, and write documentation according to university protocols.
- Foster community for 70+ residents by organizing regular events, conducting quarterly one-on-one check-ins to support resident well-being, and mediating roommate conflicts.
